

The gold layer gets acted on, not just queried

Activations is the fourth native Fivetran stage, right after Transformations. The instant `gold.fct_alert_evidence` writes a row where `severity = 'critical'`, `pattern_confidence_score ≥ 0.85`, and the member is already on the members-under-review list — a corroborated, repeat high-confidence pattern, not a one-off flag — Activations pushes the alert straight into NICE Actimize Case Manager and auto-opens a fully populated investigation case. No reverse-ETL vendor, no second copy of the data, no analyst re-keying.

TRIGGER

confidence ≥ 0.85

critical + repeat member under review

DESTINATION

Actimize

Case Manager · auto-opened case

TIME TO OPEN CASE

12 min → <30 sec

18 critical alerts / day

WHAT YOU SAY	WHAT YOU SHOW
"Halcyon FCM just tripped layered-cancels spoofing in ZB futures — third critical alert this week, confidence score 0.91. Today an analyst opens Actimize, keys in the alert ID, member ID, order IDs, pastes an evidence link — call it 12 minutes. Times 18 critical alerts a day, that's 3-plus analyst-hours gone before anyone investigates anything. Watch what happens the second <code>gold.fct_alert_evidence</code> writes this row."	Live tail on <code>gold.fct_alert_evidence</code> — Halcyon FCM row lands: severity critical, confidence 0.91, member already under review.
"Cut to the Activations sync log — same row, timestamped four seconds later."	Architecture page → Activations panel → /activations-live: Segment Definition → Field Mapping → Sync Preview → API Push.
"Cut to Actimize Case Manager — case ALT-2026-58841 is already open: subject Halcyon FCM, risk score 91, evidence attached, typology 'spoofing — layered cancels.'"	/activations-live → Destination Confirmation table, case card rendered with the matching member, risk score, and typology fields.
"Zero manual entry, zero re-typed order IDs, and the audit trail proves the case opened within seconds of detection — not whenever an analyst got to it."	Before/After framing: 12-minute manual re-keying, once per critical alert, replaced by one governed sync, zero code.

FIELD MAPPING · GOLD.FCT_ALERT_EVIDENCE → ACTIMIZE CASE MANAGER

SOURCE COLUMN	DESTINATION FIELD
alert_id	case_external_id
member_id	subject_party_id
pattern_confidence_score	risk_score
evidence_uri	evidence_attachment_url
pattern_type	typology_code

Current snapshot: 18 critical alerts / day. Closing the critical-alert-to-open-case gap reclaims roughly 3.6 analyst-hours daily for investigation instead of data entry, and closes the documented-escalation gap exchanges must show under CFTC Reg AT and SRO surveillance rules. Synthetic data — not a real exchange.
